

Tree Grates and Anti slip coatings – FAQs

Do you supply an anti-slip protection option for your tree grates?

Yes, Urban+ are able to apply an anti-slip powder coating to tree grates

What classification is the anti-slip rated to?

We have had pendulum testing giving the rating at P4 and above – suitable for outdoor surfaces.

Is the anti-slip available in any powder coat colour?

Yes, we are able to provide anti-slip to any powder coat colour, however it is better on matt applications than satin or gloss?

How is it applied?

We have a special additive that is incorporated in to the powder during the powder coating process that gives the finish its rating.

Can you apply to Stainless Steel tree grates?

Unfortunately, no we can't.

To apply to a stainless steel finished grate we need to use a clear powder but it has been found that the additive leaves a yellow tinge on the clear surface making it unsightly. We recommend adding it to a silver powder that mimics the stainless colour and coat the grates with anti-slip that way.
