

## INSTALLATION AND MAINTENANCE SS24 Balustrading

### INSTALLATION

- All balustrading should be mounted level to the ground. Packing may be required due to inconsistencies in the footpath.
- 10mm Dyna bolts or chemsets are used for securing all balustrading unless a foundation cage is used.
- Urban Fountains and Furniture will not be responsible for defects that arise from incorrect installation.
- Locktighting of foundation cage bolts is recommended.
- Due to the nature of Stainless Steel we recommend weekly washing with water and detergent.
- Regular polishing with a non-abrasive polish will help maintain the exterior of the balustrading.
- All maintenance tools and replacement parts can be purchased individually from the manufacturer.
